# thermo Sphere 

HEATING | WALL
MIPRロP

Excellence in heating solutions.

## Installation: Preparation and wiring

Step 1a \& 1b: Plan your installation \& layout
The mirror heater requires a mains supply and a switch (Step 1a) or PIR sensor (Step 1b). Measure and mark out all the necessary items before you install the heater. If necessary chase into the wall to accommodate fixtures and wires.
The mirror heater should be wired into an existing lighting circuit (Step 1a), you can also connect to a PIR sensor (Step 1b).
When planning the installation, ensure a 5 mm gap is present around the perimeter of the mirror. Any contact with hard materials could result in a breakage. (See Below)

## Step 1 \& 2 checklist

Plan and measure installationChase a groove in the wall to accommodate wiring and connectionsLeave expansion gap around the perimeter of the mirrorStep 2: Apply the heating element to the mirror
To avoid air bubbles whilst sticking the heating element, peel off the protective paper a quarter of the way. Now line up the mirror with the heating element sticky side down. Stick the first part down and ease the protective paper away whilst smoothing out the heating element onto the mirror.

Remember to position the mirror heater connection box and power cable in the closest available position to your wiring point in the wall.

## PRO TIP

It is important to install insulation. We recommend ThermoSphere insulation board behind the mirror to achieve optimal performance and efficiency.

## Important safety precautions

All electrical work must conform to current local wiring regulations and be checked or carried out by a qualified electrician

Please allow a 5 mm gap surrounding the mirror. Failure to do so could result is cracks forming due to expansion

Do not cut, puncture, use staples or nails to mount the heating element. The mirror should never be used if cut or damaged

## Installation: Adhesive and wiring

Step 3: Apply adhesive and wall mounting clips
Mirror adhesive should be applied around the perimeter of the mirror so it becomes as isolated as possible when fixed to the wall, we recommend ThermoSphere mirror adhesive (MH-ADH). Lay your mirror onto a clean towel to protect from scratches and other damage.

## PRO TIP

The heated mirror can be installed on walls made of wood, ceramic tiles, marble, etc. Walls must be dry, stable, smooth and preferably insulated.

## Step 4: Connect wiring and fix to the wall

Connect the mirror power lead to the mains at the wiring point. Then line the mirror up ensuring a 5 mm gap is maintained around the perimeter of the mirror. Gently apply pressure around the outside of the mirror and allow all adhesives to fully cure before powering up your mirror.

These instructions should be followed along with the mirror manufacturer's recommendations.

## PRO TIP

To avoid damage to the mirror, do not over tighten fixings and ensure that no point pressure is applied to the mirror.

Do not rely on the self adhesive mirror pad to adhere the mirror to the wall. Extra mirror adhesive or mechanical fixings must be used

## Step 3 \& 4 checklist

Use mirror adhesive to seal mirror against wallCheck mirror heater is as isolated as possible between the wall and mirrorCheck all wall fixtures are secure (if used)Check all electrical connections are safe
## Important safety precautions

The mirror heater is IP54 rated and should be installed in correlation with these regulations

Adhere the heater to the back of the mirror, not the wall

If you have metal surround, please ensure the mirror is grounded according to local electrical regulations

ThermoSphere Electric mirror heaters

| Stock Code | Description | Shape | Output (W) | Size (MM) |
| :---: | :---: | :---: | :---: | :---: |
| MH-0600 | Mirror Heater | Rectangular | 57 | $400 \times 600$ |
| MH-0800 | Mirror Heater | Rectangular | 96 | $600 \times 800$ |
| MH-0900 | Mirror Heater | Rectangular | 108 | $600 \times 900$ |
| MH-1000 | Mirror Heater | Rectangular | 150 | $750 \times 1000$ |
| MH-1200 | Mirror Heater | Rectangular | 204 | $850 \times 1200$ |
| MH-1300 | Mirror Heater | Rectangular | 260 | $1000 \times 1300$ |
| MHO-0600 | Mirror Heater | Oval | 45 | $400 \times 600$ |
| MHO-0800 | Mirror Heater | Oval | 76 | $600 \times 800$ |
| MHR-0380 | Mirror Heater | Round | 20 | $380 \varnothing$ |
| MHR-0520 | Mirror Heater | Round | 41 | 520 ø |

Installation accessories

| Stock Code | Description | Size |
| :---: | :---: | :---: |
| MH-DST | Double Sided Tape | $25 \mathrm{~mm} \times 50 \mathrm{~m}$ |
